

## Well Cars

All Well Cars will be built based on the Trinity prototype and will have the ribbed sides. The floor is “X” bracing, and will require something to put into the well as a floor for a riding car. These cars are articulated, and the number of units the car has is how many cars makes up one car coupler to coupler.

5 units with wells 40 feet long: \$6200

5 units with wells 48 feet long: \$6700

3 units with wells 53 feet long: \$4500

Stand alone well cars priced upon request, as will other articulation combinations, i.e.: a three unit car with wells 40 feet long.

A pup axle for transportation will be offered as well. Inquire about one upon ordering the car.

Brake line adds \$50 per unit. The brake line is run on the outside of the well as per the prototype and needs to be painted at the same time the car is, so please specify if you need a brake line run upon ordering the car. I do the hard tubing on the units from end to end as well as the flex tubing between units. You will also need to specify if you want every truck to have brakes as a different connection is needed between the units if you just want the line run with only the end units to have brakes.

Like the other cars, shipping and handling is not included. You will need to supply your own trucks and couplers.
